

Compressed Air Receivers & Accessories

Air Receivers & Receiver Kits

Vertical compressed air tanks blue RAL-5012. CE approved. Certificate is supplied with the tank. Manufactured in the EU.

Applications: The vertical tanks need very limited floor space. They include the necessary inlets/outlets and ground connections.

Installation: Always in combination with a full receiver kit. Water drain and safety relief valve.

Ensure the compressor never takes in air/solvent mix. This could cause the tank to explode.

The air receiver or tank allows the storage & control of compressed air. A device on most compressors maintains pressure at a pre-determined pressure range, allowing the compressor to operate automatically as the air is used, switching on and off accordingly. The air receiver must also be fitted with a safety device to prevent over pressurisation, a means of draining condensate and various outlet sockets. The size of air receiver (usually measured in litres) will normally be proportional to the size or capacity of air compressor fitted.
