

## Aluminium Ring Main System

### Section 8 – Ring Main Systems

### Tees with Integral Water Separator

This fitting is a valid alternative to the traditional swan-neck, it shows itself as a quicker & cheaper solution. The efficient internal system allows the air to reach the using point without any condensation which stays with in the ring main circuit, which can then be drained at a more convenient point.

The internal geometric shape allows it to be installed vertically as well as horizontally. If using horizontally please ensure that the two internal holes are turned up towards the upper side.
